

## NS Tutorial, Class 10

CSci551: Computer Networks  
SP2002 Friday Section  
John Heidemann

## ns-2, the network simulator

- a *discrete event simulator*
  - simple model
- focused on *modeling network protocols*
  - wired, wireless, satellite
  - TCP, UDP, multicast, unicast
  - web, telnet, ftp
  - ad hoc routing, sensor networks
  - infrastructure: stats, tracing, error models, etc.

## ns goals

- support networking research and education
  - protocol design, traffic studies, etc.
  - protocol comparison
- provide a *collaborative environment*
  - freely distributed, *open source*
    - share code, protocols, models, etc.
  - allow easy *comparison* of similar protocols
  - *increase confidence* in results
    - more people look at models in more situations
    - experts develop models
- *multiple levels of detail* in one simulator

## ns history

- Began as REAL in 1989
- *ns* by Floyd and McCanne at LBL
- *ns-2* by McCanne and the VINT project (LBL, PARC, UCB, USC/ISI)
- currently maintained at USC/ISI, with input from Floyd et al.

## “ns” components

- ns, the simulator itself
- nam, the Network AniMator
  - visualize ns (or other) output
  - GUI input simple ns scenarios
- pre-processing:
  - traffic and topology generators
- post-processing:
  - simple trace analysis, often in Awk, Perl, or Tcl

## ns models

- Traffic models and applications:
  - web, FTP, telnet, constant-bit rate, Real Audio
- Transport protocols:
  - unicast: TCP (Reno, Vegas, etc.), UDP
  - multicast: SRM
- Routing and queueing:
  - wired routing, ad hoc rtg and directed diffusion
  - queueing protocols: RED, drop-tail, etc.
- Physical media:
  - wired (point-to-point, LANs), wireless (multiple propagation models), satellite

## ns status

- platforms: basically all Unix and Windows
- size: about 200k loc each C++ and Tcl, 350 page manual
- user-base: >1k institutions, >10k users
- releases about every 6 months, plus daily snapshots

7

## Outlines

- **Concepts**
- Essentials
- Getting Started
- Fundamental tcl, otcl and ns
- Case Studies
  - Web, TCP, Routing, Queuing

10b\_ns: CSci551 SP2002 Friday © 2002 John Heidemann

8

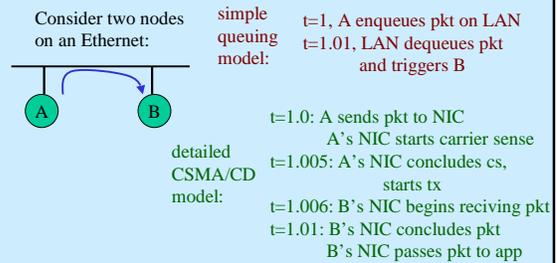

## Discrete Event Simulation

- model world as *events*
  - simulator has list of events
  - process: take next one, run it, until done
  - each event happens in an instant of *virtual (simulated) time*, but takes an arbitrary amount of *real time*
- ns uses simple model: single thread of control => no locking or race conditions to worry about (very easy)

10b\_ns: CSci551 SP2002 Friday © 2002 John Heidemann

9

## Discrete Event Examples

10b\_ns: CSci551 SP2002 Friday © 2002 John Heidemann

10

## ns Software Structure: object orientation

- Object oriented:
  - lots of code reuse (ex. TCP + TCP variants)
- Some important objects:
  - NsObject: has recv() method
  - Connector: has target() and drop()
  - BiConnector: uptarget() & downtarget()

10b\_ns: CSci551 SP2002 Friday © 2002 John Heidemann

11

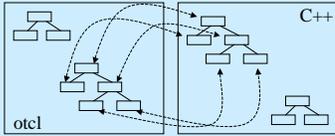

## ns Software Structure: C++ and Otcl

- Uses *two* languages
- C++ for packet-processing
  - fast to run, detailed, complete control
- OTcl for control
  - simulation setup, configuration, occasional actions
  - fast to write and change
- pros: trade-off running vs. writing speed, powerful/documented config language
- cons: two languages to learn and debug in

10b\_ns: CSci551 SP2002 Friday © 2002 John Heidemann

12

## otcl and C++: The Duality

- OTcl (object variant of Tcl) and C++ share class hierarchy
- TclCL is glue library that makes it easy to share functions, variables, etc.

10b\_ns: CSci551 SP2002 Friday © 2002 John Heidemann

13

## Outlines

- Essentials
- **Getting Started**
- Fundamental tcl, otcl and ns
  - Web, TCP, Routing, Queuing
- Case Studies

10b\_ns: CSci551 SP2002 Friday © 2002 John Heidemann

14

## Installation and Documentation

- <http://www.isi.edu/nsnam/ns/>
  - download ns-allinone
  - includes Tcl, OTcl, TclCL, ns, nam, etc.
- mailing list: ns-users@isi.edu
- documentation (see url above)
  - **Marc Gries tutorial**
  - ns manual

10b\_ns: CSci551 SP2002 Friday © 2002 John Heidemann

15

## Hello World

simple.tcl:

```
set ns [new Simulator]
$ns at 1 "puts \"Hello World!\""
$ns at 1.5 "exit"
$ns run
swallow 74% ns simple.tcl
Hello World!
swallow 75%
```

10b\_ns: CSci551 SP2002 Friday © 2002 John Heidemann

16

## Hello World, Deconstructed

```
set ns [new Simulator]
    create a simulator, put in var ns
$ns at 1 "puts \"Hello World!\""
    schedule an event at time t=1
    to print HW
$ns at 1.5 "exit"
    and exit at a later time
$ns run
    run time simulator
```

10b\_ns: CSci551 SP2002 Friday © 2002 John Heidemann

17

## Outlines

- Essentials
- Getting Started
- **Fundamental tcl, otcl and ns**
- Case Studies
  - Web, TCP, Routing, Queuing, Wireless

10b\_ns: CSci551 SP2002 Friday © 2002 John Heidemann

18

## Basic Tcl

```
variables:
set x 10
puts "x is $x"

functions and expressions:
set y [pow x 2]
set y [expr x*x]

control flow:
if {$x > 0} { return $x } else {
  return [expr -$x] }
while { $x > 0 } {
  puts $x
  incr x -1
}
```

```
procedures:
proc pow {x n} {
  if {$n == 1} { return $x }
  set part [pow x [expr $n-1]]
  return [expr $x*$part]
}
```

Also lists, associative arrays, etc.  
=> can use a real programming language to build network topologies, traffic models, etc.

10b\_ns: CSci551 SP2002 Friday © 2002 John Heidemann

19

## Basic otcl

```
Class Person
# constructor:
Person instproc init {age} {
  $self instvar age_
  set age_ $age
}
# method:
Person instproc greet {} {
  $self instvar age_
  puts "$age_ years old: How are you doing?"
}

# subclass:
Class Kid -superclass Person
Kid instproc greet {} {
  $self instvar age_
  puts "$age_ years old kid: What's up, dude?"
}

set a [new Person 45]
set b [new Kid 15]
$a greet
$b greet

=> can easily make variations of existing things (TCP, TCP/Reno)
```

10b\_ns: CSci551 SP2002 Friday © 2002 John Heidemann

20

## Basic ns-2

- Creating the event scheduler
- Creating network
- Computing routes
- Creating connection
- Creating traffic
- Inserting errors
- Tracing

10b\_ns: CSci551 SP2002 Friday © 2002 John Heidemann

21

## Creating Event Scheduler

- Create scheduler
  - set ns [new Simulator]
- Schedule event
  - \$ns at <time> <event>
  - <event>: any legitimate ns/tcl commands
- Start scheduler
  - \$ns run

10b\_ns: CSci551 SP2002 Friday © 2002 John Heidemann

22

## Creating Network

- Nodes
  - set n0 [\$ns node]
  - set n1 [\$ns node]
- Links & Queuing
  - \$ns duplex-link \$n0 \$n1 <bandwidth> <delay> <queue\_type>
  - <queue\_type>: DropTail, RED, CBQ, FQ, SFQ, DRR

10b\_ns: CSci551 SP2002 Friday © 2002 John Heidemann

23

## Computing routes

- Unicast
  - \$ns rproto <type>
  - <type>: Static, Session, DV, cost, multi-path
- Multicast
  - \$ns multicast (right after [new Simulator])
  - \$ns mrtproto <type>
  - <type>: CtrMcast, DM, ST, BST

10b\_ns: CSci551 SP2002 Friday © 2002 John Heidemann

24

## Traffic

- simple two layers: transport and app
- transports:
  - TCP, UDP, etc.
- applications: (*agents*)
  - ftp, telnet, etc.

## Creating Connection: UDP

- source and sink
  - set usrc [new Agent/UDP]
  - set udst [new Agent/NULL]
- connect them to nodes, then each other
  - \$ns attach-agent \$n0 \$usrc
  - \$ns attach-agent \$n1 \$udst
  - \$ns connect \$usrc \$udst

## Creating Connection: TCP

- source and sink
  - set tsrc [new Agent/TCP]
  - set tdst [new Agent/TCPSink]
- connect to nodes and each other
  - \$ns attach-agent \$n0 \$tsrc
  - \$ns attach-agent \$n1 \$tdst
  - \$ns connect \$tsrc \$tdst

## Creating Traffic: On Top of TCP

- FTP
  - set ftp [new Application/FTP]
  - \$ftp attach-agent \$tsrc
  - \$ns at <time> “\$ftp start”
- Telnet
  - set telnet [new Application/Telnet]
  - \$telnet attach-agent \$tsrc

## Creating Traffic: On Top of UDP

- CBR
  - set src [new Application/Traffic/CBR]
- Exponential or Pareto on-off
  - set src [new Application/Traffic/Exponential]
  - set src [new Application/Traffic/Pareto]

## Creating Traffic: Trace Driven

- Trace driven
  - set tfile [new Tracefile]
  - \$tfile filename <file>
  - set src [new Application/Traffic/Trace]
  - \$src attach-tracefile \$tfile
- <file>:
  - Binary format
  - inter-packet time (msec) and packet size (byte)

## Compare to Real World

- more abstract (much simpler):
  - no addresses, just global variables
  - connect them rather than name lookup/bind/listen/accept
- easy to change implementation
  - set tsr2 [new Agent/TCP/Newreno]
  - set tsr3 [new Agent/TCP/Vegas]

10b\_ns: CSci551 SP2002 Friday © 2002 John Heidemann

31

## Inserting Errors

- Creating Error Module
  - set loss\_module [new ErrorModel]
  - \$loss\_module set rate\_ 0.01
  - \$loss\_module unit pkt
  - \$loss\_module ranvar [new RandomVariable/Uniform]
  - \$loss\_module drop-target [new Agent/Null]
- Inserting Error Module
  - \$ns lossmodel \$loss\_module \$n0 \$n1

10b\_ns: CSci551 SP2002 Friday © 2002 John Heidemann

32

## Tracing

- Trace packets on all links into *test.out*
  - \$ns trace-all [open test.out w]

```
<event> <time> <from> <to> <pkt> <size>--<flowid> <src> <dst> <seqno>
<asseqno>
+ 1 0 2 cbr 210 ----- 0 0.0 3.1 0 0
- 1 0 2 cbr 210 ----- 0 0.0 3.1 0 0
r 1.00234 0 2 cbr 210 ----- 0 0.0 3.1 0 0
```

- Trace packets on all links in nam-1 format
  - \$ns namtrace-all [open test.nam w]

10b\_ns: CSci551 SP2002 Friday © 2002 John Heidemann

33

## Outlines

- Essentials
- Getting Started
- Fundamental tcl, otcl and ns-2
- **Case Studies**

10b\_ns: CSci551 SP2002 Friday © 2002 John Heidemann
