

Ns Tutorial 2002

Padmaparna Haldar (haldar@isi.edu)
Xuan Chen (xuanc@isi.edu)
Nov 21, 2002

Introduction

- 1989: REAL network simulator
- 1995: DARPA VINT project at LBL, Xerox PARC, UCB, and USC/ISI
- Present: DARPA <u>SAMAN</u> project and NSF <u>CONSER</u> project
 - Collaboration with other researchers including <u>CIRI</u>

Ns Goals

- Support networking research and education
 - Protocol design, traffic studies, etc
 - Protocol comparison
- Provide a collaborative environment
 - Freely distributed, open source
 - Share code, protocols, models, etc
 - Allow easy comparison of similar protocols
 - Increase confidence in results
 - More people look at models in more situations
 - Experts develop models
- Multiple levels of detail in one simulator

- SAMAN: build robust networks through understanding the detection and prediction of failure conditions
 - ASIM, RAMP, and NEWS
- CONSER: extending ns and nam to support:
 - Network research:
 - New module integration: diffserv, direct diffusion
 - Existing module improvement, new trace, etc
 - Network education: nam and nam editor, educational scripts repository, ns-edu mailing list, ns tutorial, etc

Ns Status

- Periodical release (ns-2.1b9a, July 2002)
 - ~200K LOC in C++ and Otcl,
 - ~100 test suites and 100+ examples
 - 371 pages of ns manual
 - Daily snapshot (with auto-validation)
- Stability validation
 - http://www.isi.edu/nsnam/ns/ns-tests.html
- Platform support
 - FreeBSD, Linux, Solaris, Windows and Mac
- User base
 - > 1k institutes (50 countries), >10k users
 - About 300 posts to ns-users@isi.edu every month

Ns functionalities

- Wired world
 - Routing DV, LS, PIM-SM
 - Transportation: TCP and UDP
 - Traffic sources:web, ftp, telnet, cbr, stochastic
 - Queuing disciplines:drop-tail, RED, FQ, SFQ, DRR
 - QoS: IntServ and Diffserv
 - Emulation
- Wireless
 - Ad hoc routing and mobile IP
 - Directed diffusion, sensor-MAC
- Tracing, visualization, various utilities

"Ns" Components

- Ns, the simulator itself
- Nam, the network animator
 - Visualize ns (or other) output
 - Nam editor: GUI interface to generate ns scripts
- Pre-processing:
 - Traffic and topology generators
- Post-processing:
 - Simple trace analysis, often in Awk, Perl, or Tcl

Ns Models

- Traffic models and applications:
 - Web, FTP, telnet, constant-bit rate, real audio
- Transport protocols:
 - unicast: TCP (Reno, Vegas, etc.), UDP
 - Multicast: SRM
- Routing and queueing:
 - Wired routing, ad hoc rtg and directed diffusion
 - queueing protocols: RED, drop-tail, etc
- Physical media:
 - Wired (point-to-point, LANs), wireless (multiple propagation models), satellite

Installation

- Getting the pieces
 - Tcl/TK 8.x (8.3.2 preferred):
 http://resource.tcl.tk/resource/software/tcltk/
 - Otcl and TclCL: http://otcl-tclcl.sourceforge.net
 - ns-2 and nam-1:
 http://www.isi.edu/nsnam/dist
- Other utilities
 - http://www.isi.edu/nsnam/ns/ns-build.html
 - Tcl-debug, GT-ITM, xgraph, ...

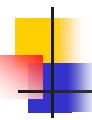

Help and Resources

- Ns and nam build questions
 - http://www.isi.edu/nsnam/ns/ns-build.html
- Ns mailing list: <u>ns-users@isi.edu</u>
- Ns manual and tutorial (in distribution)
- TCL: http://dev.scriptics.com/scripting
- Otcl tutorial (in distribution): <u>ftp://ftp.tns.lcs.mit.edu/pub/otcl/doc/tutorial.</u> html

- We tried best to validate ns with regression tests
- However: abstraction of the real world is necessary for a simulator
- You must justify the usage of this simulator based on your research goals

Tutorial Schedule

- First session (Nov 21, 2002)
 - Introduction
 - Ns fundamentals
 - Extending ns
 - Lab
- Second session (Nov 22, 2002)
 - Diffserv model (including lab)
 - Wireless networks (including lab)

Part I: ns fundamentals

- A discrete event simulator
 - Simple model
- Focused on modeling network protocols
 - Wired, wireless, satellite
 - TCP, UDP, multicast, unicast
 - Web, telnet, ftp
 - Ad hoc routing, sensor networks
 - Infrastructure: stats, tracing, error models, etc

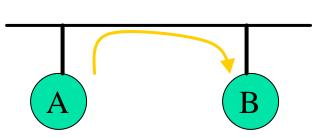

Discrete Event Simulation

- Model world as events
 - Simulator has list of events
 - Process: take next one, run it, until done
 - Each event happens in an instant of virtual (simulated) time, but takes an arbitrary amount of real time
- Ns uses simple model: single thread of control => no locking or race conditions to worry about (very easy)

Discrete Event Examples

Consider two nodes on an Ethernet:

simple queuing model:

t=1, A enqueues pkt on LAN t=1.01, LAN dequeues pkt and triggers B

detailed CSMA/CD model:

t=1.0: A sends pkt to NIC

A's NIC starts carrier sense
t=1.005: A's NIC concludes cs,

starts tx

t=1.006: B's NIC begins reciving pkt t=1.01: B's NIC concludes pkt B's NIC passes pkt to app

Ns Architecture

- Object-oriented (C++, OTcl)
- Modular approach
 - Fine-grained object composition

- + Reusability
- Maintenance
- Performance (speed and memory)
- Careful planning of modularity

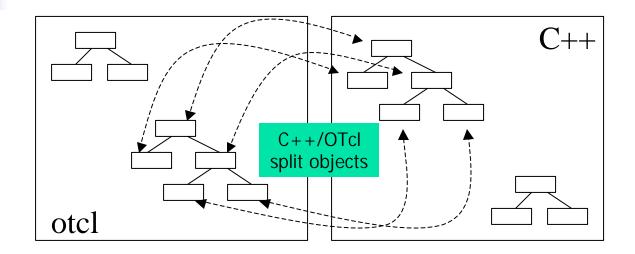

C++ and OTcl Separation

- "data" / control separation
 - C++ for "data":
 - per packet processing, core of ns
 - fast to run, detailed, complete control
 - OTcl for control:
 - Simulation scenario configurations
 - Periodic or triggered action
 - Manipulating existing C++ objects
 - fast to write and change
- running vs. writing speed
- Learning and debugging (two languages)

Otcl and C++: The Duality

- OTcl (object variant of Tcl) and C++ share class hierarchy
- TclCL is glue library that makes it easy to share functions, variables, etc

Basic Tcl

variables:

```
set x 10 puts "x is $x"
```

functions and expressions:

```
set y [pow x 2] set y [expr x*x]
```

control flow:

```
if {$x > 0} { return $x } else {
    return [expr -$x] }
while { $x > 0 } {
    puts $x
    incr x -1
```

procedures:

```
proc pow {x n} {
    if {$n == 1} { return $x }
    set part [pow x [expr $n-1]]
    return [expr $x*$part]
}
```

Also lists, associative arrays, etc.

=> can use a real programming language to build network topologies, traffic models, etc.

Basic otcl

```
Class Person
# constructor:
Person instproc init {age} {
   $self instvar age_
   set age_ $age
# method:
Person instproc greet {} {
   $self instvar age_
   puts "$age_ years old: How
   are you doing?"
```

```
# subclass:
Class Kid -superclass Person
Kid instproc greet {} {
   $self instvar age_
   puts "$age_ years old kid:
   What's up, dude?"
set a [new Person 45]
set b [new Kid 15]
$a greet
$b greet
```

=> can easily make variations of existing things (TCP, TCP/Reno)

C++ and OTcl Linkage

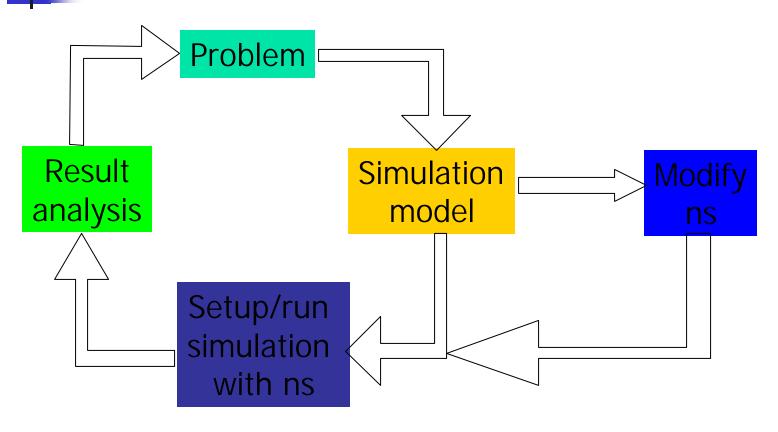

Class Tcl: instance of OTcl interpreter Tcl& tcl = Tcl::instance(); tcl.evalc("puts stdout hello world"); tcl.result() and tcl.error

- Class TclObject and TclClass
 - Variable bindings bind("rtt_", &t_rtt_)
 - Invoking command method in shadow class \$tcp advanceby 10

C++ and Otcl linkage II

- Some important objects:
 - NsObject: has recv() method
 - Connector: has target() and drop()
 - BiConnector: uptarget() & downtarget()

Using ns

Ns programming

- Create the event scheduler
- Turn on tracing
- Create network
- Setup routing
- Insert errors
- Create transport connection
- Create traffic
- Transmit application-level data

Creating Event Scheduler

- Create event scheduler set ns [new Simulator]
- Schedule events

```
$ns at <time> <event>
```

- <event>: any legitimate ns/tcl commands\$ns at 5.0 "finish"
- Start scheduler\$ns run

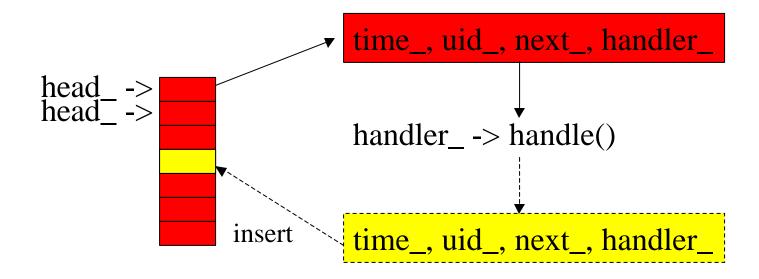

Event Scheduler

- Event: at-event and packet
- List scheduler: default
 - Heap and calendar queue scheduler
- Real-time scheduler
 - Synchronize with real-time
 - Network emulation

set ns_ [new Simulator]
\$ns_ use-scheduler Heap
\$ns_ at 300.5 "\$self halt"

Discrete Event Scheduler

Hello World - Interactive Mode

Interactive mode:

```
swallow 71% ns
% set ns [new Simulator]
03
% $ns at 1 "puts \"Hello
  World!\""
% $ns at 1.5 "exit"
2
% $ns run
Hello World!
swallow 72%
```

Batch mode:

```
simple.tcl
  set ns [new Simulator]
  $ns at 1 "puts \"Hello
    World!\""
  $ns at 1.5 "exit"
  $ns run
swallow 74% ns
  simple.tcl
Hello World!
swallow 75%
```

Tracing and Monitoring I

- Packet tracing:
 - On all links: \$ns trace-all [open out.tr w]
 - On one specific link: \$ns trace-queue \$n0 \$n1\$tr

- We have new trace format
- Event tracing (support TCP right now)
 - Record "event" in trace file: \$ns eventtrace-all

```
E 2.267203 0 4 TCP slow_start 0 210 1
```

Tracing and Monitoring II

Queue monitor

set qmon [\$ns monitor-queue \$n0 \$n1 \$q_f \$sample_interval]

- Get statistics for a queue \$qmon set pdrops_
- Record to trace file as an optional

29.0000000000142 0 1 0.0 0.0 4 4 0 1160 1160 0

Flow monitor

set fmon [\$ns_ makeflowmon Fid]
\$ns_ attach-fmon \$slink \$fmon
\$fmon set pdrops_

Tracing and Monitoring III

Visualize trace in nam

\$ns namtrace-all [open test.nam w] \$ns namtrace-queue \$n0 \$n1

Variable tracing in nam

```
Agent/TCP set nam_tracevar_ true

$tcp tracevar srtt_

$tcp tracevar cwnd_
```

Monitor agent variables in nam

```
$ns add-agent-trace $tcp $tcp
$ns monitor-agent-trace $tcp
$srm0 tracevar cwnd_
.....
$ns delete-agent-trace $tcp
```

4

Creating Network

Nodes

```
set n0 [$ns node] set n1 [$ns node]
```

Links and queuing

- link_type>: duplex-link, simplex-link
- <queue_type>: DropTail, RED, CBQ, FQ, SFQ, DRR, diffserv RED queues

Creating Network: LAN

```
$ns make-lan <node_list> <bandwidth>
<delay> <II_type> <ifq_type>
<mac_type> <channel_type>
```

```
<Il_type>: LL
<ifq_type>: Queue/DropTail,
<mac_type>: MAC/802_3
<channel_type>: Channel
```

Setup Routing

Unicast

```
$ns rtproto <type>
<type>: Static, Session, DV, cost, multi-path
```

Multicast

```
$ns multicast (right after [new Simulator])
$ns mrtproto <type>
<type>: CtrMcast, DM, ST, BST
```

 Other types of routing supported: source routing, hierarchical routing

Inserting Errors

Creating Error Module

```
set loss_module [new ErrorModel]
$loss_module set rate_ 0.01
$loss_module unit pkt
$loss_module ranvar [new RandomVariable/Uniform]
$loss_module drop-target [new Agent/Null]
```

Inserting Error Module

\$ns lossmodel \$loss_module \$n0 \$n1

Network Dynamics

- Link failures
 - Hooks in routing module to reflect routing changes

Four models

```
$ns rtmodel Trace <config_file> $n0 $n1
$ns rtmodel Exponential {<params>} $n0 $n1
$ns rtmodel Deterministic {<params>} $n0 $n1
$ns rtmodel Deterministic {<params>} $n0 $n1
$ns rtmodel-at <time> up|down $n0 $n1
```

Parameter list

```
[<start>] <up_interval> <down_interval> [<finish>]
```

Creating Connection and Traffic

UDP

set udp [new Agent/UDP]
set null [new Agent/Null]
\$ns attach-agent \$n0 \$udp
\$ns attach-agent \$n1 \$null
\$ns connect \$udp \$null

CBR

set src [new Application/Traffic/CBR]

Exponential or Pareto on-off

set src [new Application/Traffic/Exponential] set src [new Application/Traffic/Pareto]

Creating Connection and Traffic II

TCP

set tcp [new Agent/TCP]
set tcpsink [new
 Agent/TCPSink]
\$ns attach-agent \$n0 \$tcp
\$ns attach-agent \$n1
 \$tcpsink
\$ns connect \$tcp \$tcpsink

FTP

set ftp [new Application/FTP]
\$ftp attach-agent \$tcp

Telnet

set telnet [new Application/Telnet] \$telnet attach-agent \$tcp

Creating Traffic: Trace Driven

Trace driven

```
set tfile [new Tracefile]
$tfile filename <file>
set src [new Application/Traffic/Trace]
$src attach-tracefile $tfile
<file>:
```

- Binary format (native!)
- inter-packet time (msec) and packet size (byte)

Application-Level Simulation

- Features
 - Build on top of existing transport protocol
 - Transmit user data, e.g., HTTP header
- Two different solutions
 - TCP: Application/TcpApp
 - UDP: Agent/Message

Compare to Real World

- More abstract (much simpler):
 - No addresses, just global variables
 - Connect them rather than name lookup/bind/listen/accept
- Easy to change implementation
 Set tsrc2 [new agent/TCP/Newreno]
 Set tsrc3 [new agent/TCP/Vegas]

Summary: Generic Script Structure

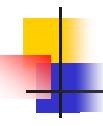

```
set ns [new Simulator]
# [Turn on tracing]
# Create topology
# Setup packet loss, link dynamics
# Create routing agents
# Create:
# - multicast groups
#

    protocol agents

#

    application and/or setup traffic sources

# Post-processing procs
# Start simulation
```

ns -> nam Interface

- Color
- Node manipulation
- Link manipulation
- Topology layout
- Protocol state
- Misc

nam Interface: Color

Color mapping

```
$ns color 40 red
$ns color 41 blue
$ns color 42 chocolate
```

```
$tcp0 set fid_ 40; # red packets
$tcp1 set fid_ 41; # blue packets
```

nam Interface: Nodes

Color

\$node color red

Shape (can't be changed after sim starts)

\$node shape box ;# circle, box, hexagon

Marks (concentric "shapes")

```
$ns at 1.0 "$n0 add-mark m0 blue box"
$ns at 2.0 "$n0 delete-mark m0"
```

Label (single string)

```
ns at 1.1 no label \"web cache no"
```

nam Interfaces: Links

Color

```
$ns duplex-link-op $n0 $n1 color "green"
```

Label

```
$ns duplex-link-op $n0 $n1 label "abced"
```

Dynamics (automatically handled)

```
$ns rtmodel Deterministic {2.0 0.9 0.1} $n0 $n1
```

Asymmetric links not allowed

nam Interface: Topo Layout

"Manual" layout: specify everything

```
$ns duplex-link-op $n(0) $n(1) orient right $ns duplex-link-op $n(1) $n(2) orient right $ns duplex-link-op $n(2) $n(3) orient right $ns duplex-link-op $n(3) $n(4) orient 60deg
```

■ If anything missing → automatic layout

4

nam Interface: Misc

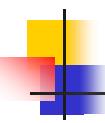

Annotation

 Add textual explanation to your simulation

```
$ns at 3.5 "$ns trace-annotate \"packet
drop\""
```

Set animation rate

```
$ns at 0.0 "$ns set-animation-rate 0.1ms"
```

Nam Demo

- tcp.tcl: simple nam animation
- red.tcl:
 - RED trace function
 - Xgraph: queue size plot
- pudp.tcl:
 - Queue monitoring
 - Agent variable tracing and monitoring
 - Nam graph: TCP sequence plot
